Mobile Sync for Webmail: Android

Please Note: Although Android runs on many different mobile devices, the set-up instructions remain pretty similar. Also, and before adding any sync service, you should consider backing up your existing data.

1. Click your phone's Settings icon, then find and click Accounts & Sync

2. Click the New Account or Add Account button

3. Select the **Corporate** or **MS Exchange** account. Note some devices only allow 1 of these accounts.

4. Enter your Email Address and Email Password. Then click Next.

5. The following screen may differ considerably depending on your device. Remember to leave **Domain Blank** (the blank domain on left requires a slash \ before your email address). The **Server** value is **mobilesync.emailsrvr.com**

Exchange server settings		Set up

6. The next screen allows some account settings to be changed. These can also be changed later so if you're unsure just keep the default settings.

Account options		
Email checking frequency		
Automatic (Push)	\bigcirc	
Amount to synchronize		
One day	\bigcirc	
Email size		
10 KB	\bigcirc	
Send email from this account by default.		
Votify me when email arrives.		
Sync contacts from this account.		
Sync calendar from this account.		
Next		

7. Finally, enter a name for the account and your display name and click **Done**.
